

Dear Commissioner Henney:

We know 1st hand what antibiotics given to animals, can do:

Example: My husband developed an allergy to an antibiotic. One day he drank some milk & broke out in huge hives all over his body, including the soles of his feet. He could not walk - so could ~~not~~ ^{not} work for many days! Drinking milk is no longer safe for him & many like him -

As a member of the Center for Science in the Public Interest (CSPI), I urge you to save human lives by banning the use of medically useful antibiotics in animal feed. Adding antibiotics to feed in order to promote growth can make bacteria resistant to those antibiotics. And that can leave physicians with no way to treat life-threatening bacterial infections in humans. That's why I support the petition filed by CSPI.
